

Bighorn Portal – PowerShell Script Reference

Script Name	Purpose / Usage
Force-GitSync.ps1	Force-pushes all local changes to the GitHub main branch to trigger Render deployment.
Create-ProjectBackup.ps1	Creates a ZIP backup of C:\BighornPortal_new, excluding heavy and sensitive directories.
Test-PortalEndpoints.ps1	Performs a local smoke test of core API endpoints (health, accounts, invoices, Shopify).
Run-BighornPortalSetup.ps1	End-to-end setup automation. Stops Node/npm, verifies environment, installs dependencies.
Maintenance-Tools.ps1	Performs cache cleanup, npm audit fix, .env validation, and database connectivity checks.
Switch-HostingSetup.ps1	Prepares environment files for migration to new hosting (Render, Docker, PM2, local). Usage: .\Switch-HostingSetup.ps1 <hosting>
